# Witness the True to Life Colors

Our highest CRI rating yet – V-TAC’s new generation of CRI>95 spotlights & bulbs is a must in commercial lighting.

A CRI of 85 to 90 percent is considered good at color rendering, while a CRI of 90 percent or above is considered excellent. A CRI index of 90 or above should be used for tasks requiring the most accurate color discrimination.

A red apple appears red because it reflects red wavelengths, but absorbs others. But not all white light sources have the same amount of red wavelength light. As a result, under different light sources, a red apple can reflect different amounts of red light, changing its appearance.

- Outstandingly engineered to show only the truest of colors
- Emphasize vivid colors to increase appeal of any product to its consumers and contribute to purchasing decisions
- Recommended for restaurants, apparel shops, supermarkets, and other retail areas

Daylight sensor supplies a simple and effective solution for daylight harvesting. Connecting to 1-10V Power source and using with LED dimmable driver.

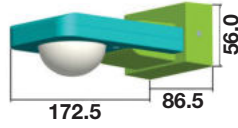

The illuminations level of lamps will get darker when ambient light gets brighter.

When daylight is insufficient, the lamp will be in 100% Illumination level, and turns to 1% Level when daylight is sufficient enough, then gradually back to 100% level when it is getting darker.
